

ABSOLUTE BRAKE®

"Is your Emergency Air Brake SECURE
in your RV, Bus or Truck?"

THEFT DETERRENT SLEEVE (TDS)

AB400LTDS

AB500LTDS

AB700LTDS

Air Brake Plunger Securing Device:

Absolute Brake® created a Lockout / Tagout Safety Device which prevents the emergency parking brake from being accidentally released. With the device firmly in place, your unattended vehicle will not roll since the parking brake remains secured. This limits your risk of property damage or personal injury. With the Master Lock® and the "TDS" applied, you now have a theft deterrent device.

How it works:

The device is applied by swiveling it around the base of the Air Brake Push/Pull Valve and the plunger knob. Once in place, the spring-loaded plunger keeps the "Air Brake Plunger Securing Device" secured to the shaft of the emergency brake of your vehicle, preventing accidental disengagement. Slide the "TDS" around the unit and apply the Master Lock® through the holes that have been provided - your vehicle is now secure.

Type of Vehicles that Use this Product:

- | | |
|--------------|--------------------|
| School Buses | Garbage Trucks |
| Fire Engines | Cement Trucks |
| | Tractor / Trailers |
