

AIR BRAKE SECURITY

The Air Brake Plunger Securing Device from Absolute Brake is designed to keep the parking brake plunger from being accidentally pushed down on motorhomes with air brakes.

The device — which is available in three different designs — automatically secures in place between the base of the air brake controller

and the plunger knob. Some models even come with a Master Lock for extra protection. The device is made of machined aluminum round stock, has a one-year warranty, and is made in the U.S.A.

The Air Brake Plunger Securing Device has manufacturer's suggested retail prices starting at \$49.99.

DEHUMIDIFIER/AIR CONDITIONER

According to product literature, the Dometic Dehumidifier/Air Conditioner is the first-ever rooftop combination unit specifically designed for RVs.

High humidity inside a motorhome can cause structural damage, and condensation can lead to mold and mildew, resulting in odors, stains, and discoloration. The 11,000-Btu unit is said to remove up to 12 gallons of water from the motorhome every 24 hours, and the humidity set point can be

adjusted from 35 percent to 70 percent. It also uses eco-friendly R-410A refrigerant, which reportedly releases heat better than R22 refrigerant.

The Dehumidifier/Air Conditioner operates with Dometic's Comfort Control Center II. The unit is powered by 120-volt-AC, and a 3.5-kilowatt or larger generator is required when electrical hookups are not available.

The Dehumidifier/Air Conditioner has a manufacturer's suggested retail price of \$1,159.

WIRELESS ALARM SYSTEM

The GE Choice Alert Wireless Alarm System from Jasco Products Company lets RVers create an alarm system according to their own needs.

The system includes a selection of sensors, sirens/alerts, and signal repeaters, allowing users to choose the area of the motorhome they want covered. Tying the system together is the Control Center, a four-zone alarm/alert

hub that includes an easy-to-program five-button keypad. Users can add weather-resistant window/door, motion, and water sensors; sirens; and alerts to the system as they deem necessary.

The Control Center has a manufacturer's suggested retail price of \$39.99, while the sensors, alarms, and alerts have prices starting at \$34.99 each. **FMC**
